SATYAM

Senior Software Engineer — Flutter / Mobile

flutter.satyam@gmail.com | +91-9180376196 | Bengaluru, India

SUMMARY

Senior Software Engineer with 5+ years building **production-grade, high-performance Flutter apps** for fintech, consumer and enterprise products, at scale up to **14M+ MAU**. Owns features end to end, from technical design to production: **mobile architecture, state management, navigation, native platform integration, offline sync, performance, CI/CD and Play Store / App Store releases**. Hires, mentors and reviews code for mobile engineers; uses **AI coding tools** (Cursor, Claude Code) daily.

SKILLS

Flutter & Dart: BLoC, Riverpod, GetX, go_router, Dio, Dependency Injection, Platform Channels, reusable widget design

Native: Android (Kotlin, Java), iOS (Swift)

Mobile Architecture: Clean Architecture, SOLID, Mobile System Design, state management, navigation & deep linking, offline sync, networking

Performance & Debugging: Startup optimization, profiling, jank reduction, crash fixing, debugging across app

Firebase & Cloud: Remote Config, App Check (Play Integrity), App Distribution, GCP, Cloud Logging, AWS

CI/CD & Release: GitHub Actions, Fastlane, Jenkins, code signing, staged rollouts, TestFlight, Play Console

Engineering Practices: Code reviews, mentoring, hiring, unit testing, test automation, Agile, Git

AI & Other: Cursor, Claude Code, GenAI/LLM tooling, REST APIs, PHP/Laravel, Python

EXPERIENCE

Twid | *Alphabet-backed fintech*

02/2026 – Present

Senior Software Engineer Bengaluru, India

- Own the **Flutter consumer fintech app** end to end: architecture, performance and production releases for Android and iOS.
- Cut **cold/warm startup from ~10s to ~1.5s** by re-architecting app initialization: minimal boot shell, lean critical-path init, non-critical SDK init deferred past first frame, and parallelized post-navigation checks.
- Architected **navigation with go_router**, with auth-state-driven global routing and deep-link/intent handling. With lazy DI, a shared Dio HttpClient and post-first-frame warmup, cut **intent-to-interactive time from ~10s to ~3s**.
- Removed launch and first-API stalls across app, SDK and API layers by integrating **Firebase App Check (Play Integrity)** with token pre-warming and caching.
- Built **CI/CD with GitHub Actions, Fastlane and Firebase App Distribution** with dev/staging/prod flavors; enabled **one-click releases, cutting release time from 5+ hrs to 10 min** and manual effort by 50%.
- Own **Android and iOS releases**: code signing, staged rollouts (Play internal → beta → production, TestFlight → App Store), Remote Config release tagging and Cloud Logging.
- **Hire, mentor and review code** for mobile engineers, setting the bar for code quality and release readiness.

Motorola Solutions

09/2024 – 02/2026

Senior Software Engineer — Module Lead Bengaluru, India

- Module Lead on the **WAVE PTX real-time push-to-talk voice app (14M+ MAU)**, responsible for module delivery and code quality.
- Integrated **Flutter with legacy native Android and iOS codebases via platform channels**, extending existing native modules and bridging them into the Flutter app.
- Reduced **call setup latency by 80%**, contributing to **37% higher subscription renewals** and **$14M** in added annual revenue.
- Improved **cold startup by 35%** by profiling and fixing I/O and main-thread contention.

Tech Alchemy | *W3Sports*

06/2022 – 09/2024

Senior Software Engineer — Team Lead London (Remote)

- Made home screen load **83% faster** by optimizing network calls.
- Reduced video compression and upload failures **by up to 95%** with a fault-recovery system.

- Built **offline sync** with delta sync, a retry queue and merge-conflict resolution, keeping data consistent through network failures.
- Eliminated all **fatal crashes** in the feed through widget recycling and lazy loading.
- As team lead, set code quality and reliability standards and drove accountability across the mobile team.

Deciml | *Fintech* **01/2021 – 04/2022**
Founding Engineer / Senior Software Developer Pune, India

- Founding engineer who owned all product tech (mobile, backend, website, cloud) from zero through the seed round.
- Shipped **CKYC onboarding** reaching **20K+ active users in 20 days**; the app grew to **350K+ downloads**.
- Launched an instant referral program that grew **AUM ~194% to ₹52L**.

EDUCATION

Bachelor of Computer Applications (BCA), Computer Science **2019**
Dr. Hari Singh Gour Central University, Sagar | CGPA 8.3
